Risk and Reward Profile

This risk and reward indicator illustrates where the Fund is positioned in terms of its possible risk and reward. The higher the Fund's position on this scale, the greater the possible reward, but also the greater risk of losing money. This risk indicator is calculated using historical data, which cannot be used as a prediction for the future. Therefore the risk classification may change over time. Even if the Fund is in the lowest risk class you can lose money, as no investments are entirely risk free.

The risk and reward indicator has been calculated using simulated historical performance data, which may not be a reliable indicator of the Fund's future risk and reward profile.

This Fund is in category 5 since the price changes of the Fund have been moderate in the past.

The following risks are not fully reflected in the above classification but still influence the Fund's value. Further information about risk can be found in the prospectus which is available at www.vam-funds.com/library/reports/?share=a.

Liquidity risk: Some of the assets of the Fund may become difficult to sell at a certain time and for a reasonable price.

Interest risk: The Fund invests in bonds, whose value is affected by changes in the interest rates.

Currency risk: The Fund invests in securities that are issued in currencies other than the base currency of the Fund. As a result the Fund is subject to currency risk, which arises from changes in the exchange rates between countries.

Derivative risk: The Fund uses derivatives, these are financial instruments whose value depends on the value of an underlying asset. Small price changes in the underlying asset can result in large price changes of the derivative.
