Applicants are assumed to have read and understood the prospectus and accept the risks of an investment in VAM Managed Funds (Lux). In particular, it is understood that they are aware that the portfolio of securities relating to each of the sub-funds of VAM Managed Funds (Lux) is subject to market fluctuations and to the risks inherent in all investments, and that the price of shares and any income from the shares may go down as well as up, and that the sub-funds of VAM Managed Funds (Lux) may be subject to volatile price movements which may result in capital loss.

VAM Global Management Company SA (the "Management Company") ensures that reinvestment of income is calculated on the actual amount distributed per participatory interest, using the ex-dividend date net asset value ("NAV") price of the applicable class of the fund, irrespective of the actual reinvestment date.

Performance figures quoted for the fund are from Lipper for Investment Management as at the date of this document for a lump sum investment, using NAV to NAV with income reinvested, and do not take any upfront manager's charge into account.

The Management Company ensures that publishing of performance of a portfolio is based on performance calculations which are done on a NAV to NAV basis over all reporting periods, provided that, where a NAV is not available, the value used to calculate the performance is clearly stated and a description of how the figures were calculated is provided.

Investments in foreign securities may include additional risks such as potential constraints on liquidity and repatriation of funds, macro-economic risk, political risk, foreign exchange risk, tax risk and settlement risk, as well as potential limitations on the availability of market information.

The risk and reward indicator illustrates where the fund is positioned in terms of its possible risk and reward. The higher the fund's position on this scale, the greater the possible reward, but also the greater risk of losing money. This risk indicator is calculated using historical data which cannot be used as a prediction for the future. Therefore, the risk classification may change over time. Even if the fund is in the lowest risk class, an investor can lose money, as no investments are entirely risk-free.

The risk and reward indicator has been calculated using simulated historical performance data (only where applicable) which may not be a reliable indicator of the fund's future risk and reward profile.

Further information about risk can be found in the prospectus which is available at www.vam-funds.com/library/reports/?share=a.

Subscriptions may only be accepted based on the information contained in the prospectus of the fund and its annual and semi-annual reports.
