## Risk and Reward Profile

The risk and reward indicator illustrates where the fund is positioned in terms of its possible risk and reward. The higher the fund's position on this scale, the greater the possible reward, but also the greater risk of losing money. This risk indicator is calculated using historical data which cannot be used as a prediction for the future. Therefore, the risk classification may change over time. Even if the fund is in the lowest risk class, an investor can lose money, as no investments are entirely risk-free.

The risk and reward indicator has been calculated using simulated historical performance data (only where applicable) which may not be a reliable indicator of the fund's future risk and reward profile.

Further information about risk can be found in the prospectus which is available at [www.vam-funds.com/library/reports/?share=a](http://www.vam-funds.com/library/reports/?share=a).

This is a marketing communication. Please refer to the VAM Managed Funds (Lux) prospectus and to the VAM Growth Fund KIID before making any final investment decisions.
